Team 46 AI Report

AI Usage Scale: [3] (check the AI usage scale document in the resources)

Models Used

Claude Code (Claude Opus 5.5), Codex (GPT-6.1 Sol), Codex (GPT-6 Astra)

Description

We came up with Duck Run ourselves. Before writing any code we drew the whole game on paper: Bill the duck, Don Crumbs, Biscuit the dog, the jellyfish and pufferfish, every stage, and the full story. Those sketches are in our presentation. We then used our designs to start building.

Claude Code (Claude Opus 5.5) was our main tool. We used it for the 3D rendering and the UI, including HUD, the pond lobby, the multiplayer rooms and the big-screen mode and helped us put up the bill character 2D image on README.

Codex (GPT-6 Astra) was used for the Supabase work: the database tables, security rules and room functions. Codex (GPT-6.1 Sol) was used to write unit tests, and it and Claude Code helped fix bugs.

The ideas, characters, story and game rules are our own. We directed the AI, play-tested the game throughout on our laptops and phones, and decided what went into it.
